

Quality Consulting Services

Hospitals, clinics, healthcare systems and health insurers: Alacer has worked with them all to streamline operations, exit sanction situations, generate millions in savings, and create new revenue streams.

Alacer's Experience Delivering Quality Programs in Hospitals, Clinics, and Practices

- Undertook a complete quality program redesign for a regional healthcare system, radically mitigating Joint Commission findings survey over survey.
- Through Alacer's culture of quality approach, moved a rural, five-campus hospital system from 19 serious Joint Commission findings and non-Leapfrog participation to a Leapfrog safety score of "A" within 32 months.
- Deployed mock-auditors to acute care settings ranging from 80 to 800+ bed to help determine and remediate areas of survey risk prior to audit visitation from state regulatory, Joint Commission, DNS and CMS resources.
- Rapid-remediation of survey findings for hospitals in several states, in each case meeting or beating mandated improvement or promised remediation deadlines and results.

People

Alacer personnel are not junior associates or freshly minted-graduates. Each team member is both academically and professionally accomplished with decades of experience healthcare and its ancillary industries.
